

The New Normal

DISINFECT & PROTECT

WHY?

It is imperative to our clients that we demonstrate our expertise when it comes to mitigating potential Coronavirus infections. This is why we have deployed a three-step process to ensure we are maintaining & cleaning the equipment inside and out for optimal performance. It is critical the PM be completed prior to any disinfection of equipment surface as well as applying an antimicrobial protectant. Dysfunctional equipment can create safety issues for users as well as hinder the disinfection process due to grime and residue inside the equipment.

Specialized Application

Only hire trained and certified technicians to work on your fitness equipment. The potential for your fitness equipment to be treated with improper disinfectants and rendered inoperable is a reality. Heartline understands these sensitive areas and we only use disinfectants that are EPA approved to kill Coronavirus and will not damage the surfaces or the sensitive electronics embedded in fitness products.

3 STEP PROCESS

1

PREVENTIVE
MAINTENANCE

2

DISINFECTION

3

ANTIMICROBIAL
PROTECTION
